# Grinding tables with extraction

We produce extraction grinding tables with a work surface size of 1250 mm, 1500 mm, 1750 mm and 2000 mm.

The work surface is equipped with a bottom extraction through holes in worktop. For the most efficient exhaust and protection of worker's health is the table equipped with rear exhaust wall, which exhausts soft dust particles away from the worker's breathing zone. We focus on high-quality table processing parts together with high level of protection of the worker against the harmful effects of dust and, last but not least, our timeless design of products.

Our extraction tables is possible delivered together with local filter unit G&G Micro JET or in a variant with connection to the central dust extraction.
